It contains image-processing tools for converting images into color-reduced, smoothed images suitable for digitizing and includes a variety of pattern fills which can be applied to sew individual regions of the image.. Along with parallel projection, false perspectives, real perspectives and lens perspectives, functions such as eye level displays and change of camera perspective (viewing angle) are also available.. By creating box shaped items along grids, Design Doll eliminates the bothersome task of drawing perspective lines.

A dedicated controller for moving fingers minutely has been made available By creating the rough shape in simple mode, then moving on to detailed mode, hand shapes can be created quickly.. With various perspective functions, deformations resembling hand drawings or emphatic expressions that cannot be represented with other 3D software are possible.. Design Doll can set multiple body models within the same scene, allowing complex compositions in which sketches tend to go askew to be drawn easily.. Data you create can be used repeatedly, reducing creation time, by simply dragging pose and body shape icons onto new models.. pes, Janomé (c) jef, and Singér (c) xxx (these may be converted by SewWhat-Pró, or other embroidery editors, to a much larger variety of embroidery file formats compatible with most home and commercial machines).

No need to go through bothersome processes such as fitting a sword to a hand after deciding on a posture.. In pursuit of pose creation speed, Design Doll is designed to manage postures with minimal controllers.. By observing from every angle, the breadth of possible expressions is increased.. With its bone adherence function, Design Doll can link items created with external software to specific parts.. Most of the built-in functions are based on requests from our customers Design Doll uses a blending method, where forms and sizes of various parts to be changed freely, allowing models to be reproduced with head to body ratios that intuitively suit the drawing.
